## Safety Precautions When Working with Electricity

Ensure you use the correct Lock out-Tag out procedure when working on equipment and not to start up again prior to the completion of maintenance or servicing work.

Comply with company's Control of Work system.

Never use an aluminium or steel ladder if you are working with any equipment at height.

Never use equipment with frayed cords, damaged insulation or broken plugs.

Always use appropriate insulated rubber gloves and goggles while working on any branch circuit or any other electrical circuit.

Always use insulated tools while working with electricity.

Always avoid water when working with electricity. Never touch or try repairing any electrical equipment or circuits with wet hands. It increases the conductivity of electric current.

If you are working with any equipment then always turn off the mains. Never work on a live circuit.
